DETAILED ACTION

Allowable Subject Matter

Claims 1-3, 5-7, and 9 are allowed.

Claims 1-3, 5 and 9 are allowable since the prior art of record does not teach an expendable container comprising a memory circuit with a low power consumption mode that keeps lessened functions of the controller for increasing an impedance of the controller to reduce an electrical current value of the antenna in combination with other features and limitations of claim 1.

Claims 6 and 7 are allowable since the prior art of record does not teach a device comprising an expendable container comprising a memory circuit with a low power consumption mode that keeps lessened functions of the controller for increasing an impedance of the controller to reduce an electrical current value of the antenna in combination with other features and limitations of claim 6.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Turner (US 6549119 B1) discloses an expendable container comprising a memory circuit with a low power consumption mode that keeps lessened functions of the controller. However, Turner does not disclose increasing an impedance of the controller to reduce an electrical current value of the antenna.
